

Case Studies Crash Attenuators

Project Title: New installation and Repairs to Crash Attenuators

Customer: Various
Location: Interstates in Virginia
Percent Complete: N/A
Completion: N/A

Scope of Work: We supply new units for permanent and temporary installation. With new installations, each unit must be anchored to the concrete/asphalt and the sometimes to the subsequent barriers. For currently installed units, we work with the contractor to document and analyze the damage from an impacted unit. Once a parts list is created, we supply the materials for the contractor.

Equipment: The equipment often ranges from impact wrenches, angle grinders, and epoxy dispensing guns.

Installation: Each installation is inspected by VDOT. The repairs for damaged are analyzed individually and repaired shortly after an incident has occurred.

3 locations in Virginia serving customers throughout the Mid-Atlantic region and beyond for 80 years.
